FRANCIS W. SARGENT  
GOVERNOR  
CARROLL P. SHEEHAN  
COMMISSIONER

THE COMMONWEALTH OF MASSACHUSETTS  
DEPARTMENT OF COMMERCE AND DEVELOPMENT  
LEVERETT SALTONSTALL OFFICE BUILDING  
100 CAMBRIDGE STREET, BOSTON 02202  
727-3218

FRANCIS W. SARGENT  
GOVERNOR

THE COMMONWEALTH OF MASSACHUSETTS  
EXECUTIVE DEPARTMENT  
STATE HOUSE, BOSTON 02133

In a continuing effort to enhance the economic growth of the Commonwealth, the Department of Commerce and Development has developed this report as one of a series covering this general area of interest. It is our intention to make these reports available to the citizens of our Commonwealth. I hope that by doing so we will all have a better understanding of our labor forces and industrial development. Continuing efforts to expand our economic base are absolutely necessary to assure the future well-being of the Commonwealth.

*Francis W. Sargent*

As part of a series of study reports being prepared in connection with its research program, the Massachusetts Department of Commerce and Development is pleased to make this report available to you.

A healthy state economy is brought about through the collective and concerted efforts of the private and public sectors. However, the accuracy of the decisions pertaining to the future of the economy hinge largely on the understanding and evaluation of the economy of the past. The objective of this report is to provide, in a clear and consistent manner, a state-wide historical data base so necessary to arrive at this understanding.

Sincerely,

*Carroll P. Sheehan*  
Commissioner

### ACKNOWLEDGEMENTS AND CREDITS

The contents of this statistical abstract were prepared in part through a grant from the New England Regional Commission, and in part through use of state funds of the Commonwealth of Massachusetts, Department of Commerce and Development.

The statistical abstract was prepared as part of the long range departmental research program being undertaken by the staff of the Bureau of Area Planning and the consultants affiliated with the Bureau.

Work on the following tables was directed by K. Heinz Muehlmann, Consulting Economist, and compiled by Elizabeth Bridges and Barbara Wells, Planning Assistants. Typing was done by Mildred H. Walker and Jeanne O'Donnell.

## Chapter I - Explanation and Definitions of Source Data

## INTRODUCTION

The following statistical abstract contains the basic statistics which were compiled for use in the preliminary analysis of Massachusetts' sectoral economies.

The five major sections of the statistical abstract are made up of tables with information on gross state product and gross national product, personal income, broad industry groups, and manufacturing (by industry and by Standard Metropolitan Statistical Areas).

The following explanatory notes include a discussion of source material and definitions of terms used in the tables.

### GROSS STATE PRODUCT

Since no independent estimates of industrial gross product are available on a state level, it is necessary to derive these figures indirectly using national ratios. Figures in the accompanying tables are based on the assumption that the ratio of the output in each industry for the state to that in-

dustry's output for the United States economy is equal to the corresponding ratio of civilian income received in current production in each industry. Estimates of Gross National Product Originating by broad industrial source were provided by the Office of Business Economics, United States Department of Commerce. Manufacturing product was obtained by using value added/gross product ratios. Value added data appears in the Census of Manufactures and in the Annual Survey of Manufactures. The Office of Business Economics also provides a series on civilian income received in current production by state and broad industrial group from 1947 to 1966.

The method used in estimating Gross State Product Originating relies heavily on the framework put forth by John W. Kendrick and C. Milton Jaycox in "The Concept and Estimation of Gross State Product" in the Southern Economic Journal (October, 1962).

---

### PERSONAL INCOME

Personal income tables (Chapter V) contain information for Massachusetts and the United States for the years 1929, 1940, and 1948 through 1968, and for Standard Metropolitan Statistical Areas (SMSA's, for selected years between 1929 and 1967. The SMSA definitions as used for Personal Income do not conform with the SMSA definition of the Bureau of the Budget for New England. Although Personal Income data is given on an SMSA basis, it is actually for counties in which the respective SMSA's are located. If an SMSA, such as Boston, extends over several counties, all counties in which the SMSA is located are included. The specific delineation of each SMSA is given in a footnote at the bottom of each table.

The Office of Business Economics of the United States Department of Commerce provided data for personal income, defined as the current income received by persons from all sources, inclusive of transfer among persons. Not only individuals (including owners of unincorporated enterprises) but nonprofit institutions, private trust funds, and private

pension and welfare funds are classified as "persons." Personal income is the sum of wage and salary disbursements, other labor income, proprietors' income, rental income of persons, dividends, personal interest income, and transfer payments, less personal contributions for social insurance. Beginning with 1960, the estimates include data for Alaska and Hawaii. Personal income differs from national income in that personal income includes transfer payments and government interest, while it excludes both employee and employer contributions for social insurance, corporate profits tax liability and inventory valuation adjustment, and undistributed corporate profits. A minor difference also appears in the wage and salary components in that retroactive wage payments are included in personal income when received and in national income when earned.

Total disposable income is the income remaining to persons after deduction of personal tax and nontax payments to general government.

SMSA data include a breakdown of personal income by major

type of payment for 1967. Other labor income is defined as compensation for injuries, employer contributions to private pension and welfare funds, pay of military reservists (except pay of reservists on full-time active duty which is included in Government wages and salaries), and other miscellaneous items. Proprietors income measures the monetary earnings and income in kind of sole proprietorships, partnerships, and producers' cooperatives from their current business operations, other than supplementary income of individuals derived from renting property. As with corporate profits, capital gains and losses are excluded and no deduction is made for depletion.

The category of property income included dividends, rental income (the monetary earnings of persons from the rental of real property, except those of persons primarily engaged in the real estate business; the imputed net rental returns to owner - occupants of nonfarm dwellings; and the royalties received by persons from patents, copyrights, and rights to natural resources), and personal interest income (the monetary interest and the imputed interest according to individuals and

nonprofit institutions).

Transfer payments consist of monetary income receipts of individuals from government and business (other than government interest) for which no services are currently rendered, of government payments and corporate gifts to nonprofit institutions, and of individuals' bad debts to business. Personal contributions for social insurance include contributions of employees and of self-employed persons to old age and survivors insurance and employee contributions to State unemployment insurance, railroad retirement insurance, Federal civilian and State and local employee retirement funds, cash sickness compensation funds, premium payments to Government life insurance funds and national service life insurance funds.

#### BROAD INDUSTRY GROUPS

Tables for broad industry groups (Chapter VI) summarize data for all non-agricultural industries, including employment (in thousands), civilian income (in millions of dollars) and wages and salaries per employee (in dollars) from 1958 to 1966.

---

Employment data was obtained from the Bureau of Labor Statistics. The ELS definition of employment may be found following the discussion of manufacturing tables.

Figures for civilian income and for wages and salaries were taken from information compiled by the Office of Business Economics (OBE) of the United States Department of Commerce. Civilian income consists of wage and salary disbursements, other labor income, and proprietors' income. Government income does not include earnings of military personnel. Wages and salaries consist of the monetary enumeration of employees commonly regarded as wages and salaries, inclusive of executives' compensation, commissions, tips, and bonuses, and of payments in kind which represent income to the recipients.

#### MANUFACTURING; GENERAL DISCUSSION OF DATA SOURCES

The largest group of tables (Chapter VII) in the report contains data for manufacturing industries at the two - and three - digit levels of the SIC (Standard Industrial Classification) code system.

Data for these tables, which present state and national information for the years 1958 through 1968, were collected from several sources. There are two detailed references available for industrial employment, and both have been listed on each table. Employment figures given in thousands are from the Division of Employment Security (DES) for Massachusetts and from the Bureau of Labor Statistics (ELS) for the United States; employment figures given in actual numbers are from the Census of Manufactures and the Annual Survey of Manufactures (ASM) published by the Bureau of the Census. The remaining four columns in each table (payroll - in thousands of dollars; value added - in thousands of dollars; value added per man-hour - in dollars and cents; and wages per production worker - in dollars) were taken directly or calculated from Census and ASM data. 1967 data for employment (number), value added, man hours, wages, and production workers were taken from the preliminary report of the 1967 Census of Manufactures.

The lack of comparability of employment data from DES, ELS, and ASM should be noted. Definitions of the category "employ-

ment" (given below) are quite similar; differences in actual figures may be ascribed to differences in methods of data collection and establishment classification.

The ELS Handbook of Methods for Surveys and Studies (Bulletin No. 1458, U.S. Department of Labor) states: "Employment estimates derived by the Bureau of the Census from its quinquennial censuses and from the annual sample surveys of manufacturing establishments may differ from ELS employment statistics. The most important reason for difference stems from the degree to which multiproduct establishments file separate or combined reports in one survey but not the other, which may result in different industrial classification of employment. There is also a significant difference at the more detailed industry levels, since Census classifies auxiliary units and central and district administrative units on the basis of the most appropriate 2-digit major group, while ELS codes these units to the most appropriate 4-digit industry. For broad categories, however, the two surveys do show similar levels and trends."

ELS data is comparable to DES data, since ELS figures are

based upon the data on employment collected as a part of the unemployment insurance program by the Research and Statistics Departments of the Division of Employment Security.

In all cases, the latest revised figures were used when available.

The Bureau of Labor Statistics defines employment as persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. The data excludes proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households. Salaried officers of corporations are included. Government employment covers only civilian employees; Federal military personnel are excluded from the estimates of total non-agricultural employment.

Persons on an establishment payroll who are on paid sick leave (when pay is received directly from the firm), or paid holiday or paid vacation, or who work during any part of the pay period and are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed

---

are persons who are laid off, on leave without pay or on strike for the entire period, or who are hired but do not report to work during the period.

The Annual Survey of Manufactures defines employment as all full-time and part-time employees on the payroll of operating manufacturing establishments who worked or received pay for any part of the pay period which included the 12th and ended nearest the 15th of the months specified on the report form. At the all-industry level, the employees of central administrative offices and auxiliaries are included. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Excluded are members of the Armed Forces and pensioners carried on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms, however, are excluded from the total.

ASM's category of production workers includes workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing,

warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plant's own use (e.g., power plant), record keeping, and other services closely associated with these production operations at the establishment covered by the report. Supervisory employees above the working foreman level are excluded from this category.

Payrolls, by ASM's definition, are comprised of gross earnings paid in the calendar year 1963 to all employees on the payroll of operating manufacturing establishments. Respondents were told they could follow the definition of payrolls used for calculating the Federal withholding tax. It includes all forms of compensation such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and compensations in kind, prior to such deductions as employees' Social Security Contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of corporations; it excludes payments to members of Armed Forces and pensioners carried on the active payroll of manufacturing establish-

ments.

The 1963 Census definition of payrolls, identical to that recommended to all Federal statistical agencies by the Bureau of the Budget, is also the same as the 1958 Census definition. It should be noted that this definition does not include employer's Social Security contributions, or other nonpayroll labor costs such as employees' pension plans, group insurance premiums, and workmen's compensation.

As in the case of employment figures, the payrolls of separate central administrative offices and auxiliary units of multiestablishment companies are not included in the totals for individual industries or industry groups.

The ASM category of man - hours includes all plant working hours of production and related workers as defined above. The total represents all man - hours worked or paid for at the plant, including actual overtime hours (not straight-time equivalent hours). It excludes hours paid for vacations, holidays, or sick leave, when the employee was not at the plant. Where employees elected to work during the vacation period, only actual

hours worked by such employees were reported.

Value added, as found in ASM data, is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-progress inventories between the beginning and end of the year.

It does not exclude, as described in the paragraph below, purchased services. Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

Value added by manufacture should not be confused with "national income originating in manufacturing," as presented in the national income by industrial origin estimates compiled by the Office of Business Economics (OBE), Department of Commerce. The latter measure is the sum of factor costs incurred by an industry in production and is, therefore, a more "net" concept of value added than that used in the Census of Manufactures. "Income orig-

---

inating" excludes, in addition to cost of material, such other costs as depreciation charges, state and local taxes (other than corporate income taxes), allowances for bad debts, and purchases of services from non-manufacturing enterprises.

#### STANDARD METROPOLITAN STATISTICAL AREAS

Manufacturing employment figures for Standard Metropolitan Statistical Areas (Chapter VI) were compiled from DES data. The DES definition of employment (similar to the BLS definition) is given in the preceding section on manufacturing data.

The Standard Metropolitan Statistical Area is a device designed by the Bureau of the Budget to present statistical material for metropolitan areas in a uniform manner. First used in 1949 (and at that time termed "Standard Metropolitan Areas"), the SMSA definitions replaced the often overlapping and conflicting statistical devices used earlier - "labor market areas," "industrial areas," "metropolitan counties," and "metropolitan districts". SMSA's are established on the basis of a specific criteria. In general, an SMSA contains at least one city of 50,000 population, plus

surrounding areas which are related to the central city economically and socially. Definitions of SMSA's are revised before and after each decennial census, with towns or counties added or deleted according to changes in employment and other variables.

The present study of the Massachusetts economy utilized employment and wage data obtained from the Division of Employment Security for the state's SMSA's for 1960 and 1967. In 1963, the Bureau of the Budget added several towns to the 1960 SMSA definitions for Massachusetts. Therefore, in order to have comparable data for 1960 and 1967, adjustment was necessary. Data for Massachusetts towns which were included in 1967 definitions was compiled separately for 1960 and added to their respective 1960 SMSA figures; thus, all SMSA data included here is based on 1967 definitions as listed here.

Only the Massachusetts portions of the following SMSA's were included in the DES data; portions of other states are included in official definitions of Fall River (Rhode Island), Lawrence-Haverhill (New Hampshire), and Springfield-Chicopee-Holyoke (Connecticut).

Boston SMSA

Essex County (part) - Beverly, Lynn, Peabody, Salem (cities);  
Danvers, Hamilton, Lynnfield, Manchester, Marblehead,  
Middletown, Nahant, Saugus, Swampscott, Topsfield,  
Wenham (towns).

Middlesex County (part) - Cambridge, Everett, Malden,  
Medford, Melrose, Newton, Somerville, Waltham, Woburn  
(cities); Arlington, Ashland, Bedford, Belmont, Bur-  
lington, Concord, Framingham, Lexington, Lincoln,  
Natick, North Reading, Reading, Sherborn\*, Stoneham,  
Sudbury, Wakefield, Watertown, Wayland, Weston, Wil-  
mington, Winchester (towns).

Norfolk County (part) - Quincy (city); Braintree, Brookline,  
Canton, Cohasset, Dedham, Dover, Holbrook, Medfield,  
Millis\*, Milton, Needham, Norfolk, Norwood, Randolph,  
Sharon, Walpole, Wellesley, Westwood, Weymouth (towns).

Plymouth County (part) - Duxbury, Hanover, Hingham, Hull,  
Marshfield, Norwell, Pembroke, Rockland, Scituate  
(towns).

Suffolk County - Boston, Chelsea, Revere (cities);  
Winthrop (town).

Brockton SMSA

Bristol County (part) - Easton (town).

Norfolk County (part) - Avon, Stoughton, (towns).

Plymouth County (part) - Brockton (city); Abington,  
Bridgewater, East Bridgewater, Hanson, West  
Bridgewater, Whitman (towns).

Fall River SMSA

Bristol County (part) - Fall River (city); Somerset,  
Swansea, Westport (towns).

Fitchburg - Leominster SMSA

Middlesex County (part) - Shirley, Townsend\* (towns).

Worcester County (part) - Fitchburg, Leominster (cities);  
Lunenburg, Westminster\* (towns).

Lawrence - Haverhill SMSA

Essex County (part) - Lawrence, Haverhill (cities);  
Andover, Georgetown\*, Groveland, Merrimac\*,  
Methuen, North Andover, West Newbury\* (towns).

Lowell SMSA

Middlesex County (part) - Lowell (city); Billerica,  
Chelmsford, Dracut, Tewksbury, Tyngsborough,  
Westford\* (towns).

New Bedford SMSA

Bristol County (part) - New Bedford (city); Acushnet,  
Dartmouth, Fairhaven (towns).  
Plymouth County (part) - Marion\*, Mattapoisett\* (towns).

Pittsfield SMSA

Berkshire County (part) - Pittsfield (city); Dalton,  
Lenoxborough\*, Lee, Lenox (towns).

Springfield-Chicopee-Holyoke SMSA

Hampden County (part) - Chicopee, Holyoke, Springfield,  
Westfield (cities); Agawam, East Longmeadow,  
Hampden\*, Longmeadow, Ludlow, Monson, Palmer,  
Southwick\*, West Springfield, Wilbraham (towns).  
Hampshire County (part) - Northampton (city); East-  
hampton, Granby\*, Hadley, South Hadley (towns).

Worcester County (part) - Warren (towns).

Worcester SMSA

Worcester County (part) - Worcester (city); Auburn, Berlin,  
Boylston, Brookfield, East Brookfield, Grafton, Holden,  
Leicester, Millbury, Northborough, Northbridge, North  
Brookfield, Oxford, Paxton\*, Shrewsbury, Spencer,  
Sterling\*, Sutton, Upton, Westborough, West Boylston  
(towns).

Asterisks (\*) indicate towns added in 1963.
